

Accessibility Statement

Beyond Linear is designed to feel clear, calm and easy to navigate — particularly for people who may already feel overwhelmed by busy or overly complicated online spaces.

Accessibility matters here not only in a technical sense, but also in the way information is presented and experienced.

The aim is to create a website that feels:

- readable
- predictable
- low-pressure
- mobile-friendly
- supportive of different ways of thinking and processing information

What Beyond Linear Tries To Prioritise

The website is designed with the following in mind:

- clear language
- readable text sizes
- simple navigation
- mobile accessibility
- reduced visual clutter
- consistent layouts
- structured headings
- manageable sections of information
- calm visual pacing

Where possible, content is written in a way that avoids unnecessary jargon or overly dense blocks of text.

Neurodiversity & Cognitive Accessibility

Beyond Linear is specifically focused on supporting adults with ADHD. This means accessibility is considered not only in terms of technology, but also cognitive load and emotional experience.

The intention is to create an experience that feels:

- understandable rather than overwhelming
- supportive rather than demanding
- structured without feeling rigid

Ongoing Improvements

Accessibility is an ongoing process rather than a finished task.

The website will continue evolving over time as improvements are identified and feedback is received.

Feedback & Support

If something on the website feels difficult to access, navigate or understand, feedback is always welcome.

You can get in touch through the contact page and reasonable efforts will be made to improve the experience where possible.
